

VEC offers regional platform for SME to showcase their technology and capabilities across innovative networks

SimX is a Salford based leading consultancy and research company specialising in modelling and simulation of Production Systems (including Advanced Robotics-based and Vision Systems), Resource Management and Process Planning in a wide variety of areas in the Manufacturing and Service Industry.

CHALLENGE

SimX wanted to gain greater exposure across a range of industries across the North West for its innovative and unique offering for clients across industry.

SOLUTION

As a focal point for Virtual Engineering and with its reputation for Knowledge Exchange and innovative networks, the Virtual Engineering Centre helped SimX Ltd to raise awareness, by providing a bespoke platform.

BENEFITS

This platform enabled SimX to demonstrate its capabilities and support adoption of the company's specialist engineering software products across the Advanced Manufacturing sector, in particular, Aerospace within the region.

In addition, the VEC has promoted SimX capabilities through Technology Showcase opportunities and collaboration programmes to encourage industry uptake of the technologies.
